

May We Offer You A Totally Unfair Advantage Over Your Competitors?

It's difficult to imagine today's dietitian conducting business without the support of powerful and flexible Nutrition and Fitness Software. But nutrition software packages are not equal. If you need to handle a wide variety of clients more quickly, cost-effectively, and thoroughly, you need software that can handle a wide variety of tasks. **Consider these features:**

1 Royalty-Free Intake Module. The software lets you burn a CD that you can give to your clients... let them install the software to their PC's and record their own food intakes for any number of days... they click a button to email you the results so you can produce the reports for them. Charge less. Earn more.

2 The Nutrient Density View. Get an "apples-to-apples" comparison for all nutrients for hundreds or even thousands of foods at once. View the nutritional data for 100 calories of every food item in a spreadsheet view. Find the *richest* sources of any nutrient instantly.

3 Install on Multiple PC's *without paying for multiple copies.* So long as you're the only user, your license should permit you to install your software to your work, home, and notebook computers.

4 Integrated Backup and Restore. Install your software to your work and home computers. Start your software and click the Backup Icon to backup all the data on your work PC. Email this compact file to yourself at home. Click the Restore Icon at home to restore your work PC's information to your home PC. Never manually copy and transfer files again.

5 Initial Assessment Reports. Customized Assessment Reports look like you gave up your evening to produce - but take just seconds to create. These highly customizable multi-page reports are conversational... just like a personal report you'd prepare for your client if you only had the time.

6 Export the Nutrient Database into other applications. Select the foods. Select the nutrients. Click a button and export the software's nutrient database into a form suitable for use with any spreadsheet or database application.

7 Generate Nutrition Facts Labels *at no extra charge.* Generate labels in a wide variety of formats. Merge ingredients, sorted from high-to-low based on gram weight. Save the labels as BMP (document-friendly) or JPG (Web-friendly) images.

8 Nutrient Data Used in 2 Million Books. Does the nutrient database serve as the foundation for the top-selling series of nutritional information books?

9 Custom Report Generator. Generate highly professional *customized* reports in a tabular, spreadsheet layout. Select the type of report, nutrients to include, the days, the meals. Specify pie chart and shading colors. Border styles. Drop shadows. Dividers. Line widths. Decide whether to include exchanges, recommendations, pie charts, Nutrition Facts Labels, recipe photos, company logos, and/or icons.

10 24-Hour Intake/Activity Tracking. This method of tracking allows you to measure food intake and expenditures separately, then calculate a surplus or deficit of calories at day's end... the software uses this information to forecast your client's future results.

11 Cookbook Publication Support. Most cookbook authors do twice as much work as they need to... they use nutrient analysis software to generate the numbers, then they use a word processor to create the publishable document. Your nutrition software should do all of this for you.

12 Track and Graph Body Fat Content. Many experts agree that the best way to achieve ideal body weight is not by consulting any of the multitude of "Ideal Weight" Charts (all of which disagree), but by achieving a desirable body fat content. The software will track body weight or body fat content graphically against the client's target goal.

Now consider this: Neither the Food Processor from ESHA Research nor Nutritionist Pro from First DataBank provide these capabilities... NutriBase from CyberSoft, Inc. provides all of them. NutriBase expands its lead over its competitors so you can stay ahead of yours.

NutriBase... the Obvious Choice. 800-959-4849
